Singapore HDB Resale Flats Analytics - Data Dictionary

Business Context

The Singapore HDB Resale Flats dataset contains residential property resale transactions for Housing and Development Board (HDB) flats in Singapore. The dataset supports real estate analytics, housing market analysis, property valuation studies, urban planning, and geographic trend analysis. By combining property characteristics, lease information, transaction values, and geographic attributes, analysts can evaluate housing demand, resale price trends, property affordability, and location-based market performance.

HDB Resale Flats

Table Description

The HDB Resale Flats table serves as the primary transactional table within the dataset. Each record represents a resale transaction for a residential flat and contains information about the property, transaction period, lease characteristics, resale value, and geographic location. The table supports housing market analysis, price trend analysis, lease depreciation studies, geographic comparisons, and urban development reporting.
